1. Introduction

This is the Master Test Plan for the **ConcernTrack: Web-based School Concern and Feedback Reporting System** project. This document contains the features to be tested, procedures for executing the defined tests, and identifies specific test cases. In these test cases, required inputs and expected results are recognized, step-by-step procedures are provided, and the pass/fail criteria for determining acceptance are outlined.

This testing phase relates to other evaluation activities such as system analysis and reviews, ensuring that the results of the test cases are written clearly to state the outcome of each scenario. This also serves as a basis for the developers in determining the flaws of the system's features, providing a clear understanding of which specific aspects need technical improvement.

The estimated timeline for this project is within 8 months, and any delays in the development process could have significant effects on the test plan.

1.1. System Overview

ConcernTrack is developed to replace the manual system of handling and tracking institutional grievances, suggestions, and feedback within the campus. The primary stakeholders—comprising students, faculty members, parents, and non-teaching staff—frequently face challenges with traditional reporting methods, such as paper-based complaint forms or physical suggestion boxes. These manual methods often lack strict confidentiality, suffer from processing delays, and provide no means for users to track the status of their submissions. Meanwhile, school administrators and designated handling departments struggle to efficiently sort, prioritize, and monitor incoming concerns through paperwork.

To resolve these operational bottlenecks, **ConcernTrack** provides a centralized, secure, web-based platform that streamlines the entire feedback lifecycle. The system allows users to seamlessly submit concerns, attach relevant details, and monitor resolution progress in real-time, while equipping administrators with an automated dashboard to categorize, assign, and manage cases efficiently.

1.2. Test Approach

The testing approach for the TrainME project will carry out the Unit, System/Integration and Acceptance test levels. One of the ICT personnel will serve as full time independent test person for system/integration testing.

The developer will carry out the Unit Testing and will be approved by the project adviser. Proof of unit testing will be provided to the adviser for complete acceptance of each module.

System/Integration testing will also be performed by the developer. No specific test tools are available for this project.

Acceptance testing will be done by one of the staff of the ICT department with the assistance of the developer. The acceptance test will be in parallel with the existing manual process for a period of less than a month.

1.3. Definitions and Acronyms

Table 1. Definitions and Acronyms

Term	Definition
Admin/Administrator (Extension Coordinator)	System user who is permitted to manage, configure, and control the entire system, including user access control and report distributions.
Users	The campus community members—composing of students, faculty members, parents, and non-teaching staff—who are allowed to register their profiles, submit concerns or feedback, and track the live progress of their reports.
Handling Personnel (Department Heads)	Institutional workers or office representatives who are granted permission to access, review, process, and resolve specific concerns assigned to their respective departments.
Web-based Application	A software package that can be accessed through a web browser. The software and database reside on a central server and are accessed over a network.
ISUFST-SEC	Iloilo State University of Fisheries Science and Technology – San Enrique Campus.
ConcernTrack	A collective term for the Web-based School Concern and Feedback Reporting System; the name of the system which refers to an online reporting, tracking, and ticketing management platform for institutional grievances and suggestions.
Integration Testing	A level of test undertaken to validate the interface between internal components of a system. Typically based upon the system architecture.
Black-box Testing	A type of testing where the internal workings of the system are unknown or ignored. Testing to see if the system does what it's supposed to do.
System Testing	A comprehensive test undertaken to validate an entire system and its characteristics. Typically based upon the requirements and design of the system.
Unit Testing	A level of test undertaken to validate a single unit of code. Typically conducted by the programmer who wrote the code.
White-box Testing	Testing based upon the internal structure of the system. Testing not only what the system does, but also how it does it.
STD	Software Test Document. A document that details the test plan, test cases and test logs of the features of the project.
PHP	Hypertext Preprocessor. It is a widely-used open source general-purpose scripting language that is especially suited for web development and can be embedded into HTML.

Capstone Project*ConcernTrack:**Web-based School Concern and Feedback Reporting System*

IEEE	Institute of Electrical and Electronics Engineers. The world's largest technical professional organization for the advancement of technology

2. Test Plan

This section lists the things the proponent intends to test within the scope of this test plan. The information includes version numbers, configuration requirements, and key delivery schedule issues for critical elements. The features to be tested are intended to be delivered to the client. It is assumed that unit testing will be done through black box testing and testing all module interfaces will be ensured

The **ConcernTrack** system and subsystem interfaces to be tested are reflected in Table 2.

Table 2. ConcernTrack Interfaces Test Plan

User/Interface	System/Subsystem
Login	- Admin - Handling Personnel - Stakeholder
Admin	- Home/Dashboard - User Management - Category/Department Management - Concern Tracking & Logs - Notifications - Analytics & Reports - System Settings - Profile
Users	- Home/Dashboard - Submit Concern/Feedback - Track Submitted Reports - Notifications - Profile

The external interfaces to the following browser will be tested:

- Google Chrome
- Microsoft Edge
- Mozilla Firefox

The basic performance test is outlined in Table 3.

Table 3. Performance Test

1. Login User Login (Admin, Handling Personnel, Stakeholder)	3. Handling Personnel - Receive New Concern Notification - View Assigned Concerns Queue - Update Concern Status (Submitted, Pending, Resolved) - Input Resolution Action Taken & Remarks - Upload Supporting Verification Documents - View Departmental Performance History - Update Personnel Profile
2. Admin - Register Handling Personnel - Update User Status - Add Concern Category - Update Concern Category - Add School Department - Update School Department - Assign Incoming Concern - Reassign or Forward Concern - View Analytical Dashboard Data - Generate Graphical Reports of Concerns - Print Concern Resolution Summaries	4. Stake Holder - Register Profile - Update Stakeholder Profile - Submit Concern/Feedback - Upload Supporting Evidence - View Submitted Concerns History - Receive Status Update Notification
Filter Concerns, Users, Logs

Maintenance

2.1 Features to be Tested

Table 4 reflects the **ConcernTrack** features to be tested, as well as the respective description and level of priority. The level of priority uses a simple rating scale described as *High*, *Medium*, and *Low* denoted as *H*, *M*, and *L* respectively. They are further grouped as system, technological, and quality features.

Table 4. ConcernTrack features to be tested.

System Features	Priority	Task ID	Description
Login			
User Login (Admin, Handling Personnel, Users)	H	CTNo. 1.0	A secure login form where all three types of users can be granted access to the system by entering their verified username and password.
Admin			
Add Handling Personnel	H	CTNo. 2.0	Allows the admin to register and create accounts for department heads or staff responsible for resolving complaints.
Update User Accounts	L	CTNo. 2.1	Edits or modifies existing user profiles, account permissions, and active statuses within the system.
Update Concern Category	L	CTNo. 3.1	Provides a mechanism to modify or update existing concern categories and department designations.
Assign and Route Concerns	H	CTNo. 4.0	Allows the system or admin to route incoming reports directly to the appropriate department for action.
View Analytical Dashboard	M	CTNo. 5.0	Displays graphical metrics, summaries, and charts regarding the volume and types of concerns filed.

Capstone Project*ConcernTrack:**Web-based School Concern and Feedback Reporting System*

Print Summary Reports	M	CTNo. 5.1	Provides a feature to generate and print data summaries of resolved or pending school concerns.
System Settings and Logs	L	CTNo. 6.0	Allows the admin to view system audit logs and adjust core platform configurations.

Capstone Project

ConcernTrack:

Web-based School Concern and Feedback Reporting System

Handling Personnel			
View Assigned Concerns Queue	H	CTNo. 7.0	Allows department heads or handling staff to view and access the specific issues routed to their office.
Update Concern Status	H	CTNo. 7.1	Enables personnel to change report stages progressively (e.g., from "Pending" to "Under Review" or "Resolved").
Input Resolution Remarks	H	CTNo. 7.2	Allows personnel to input text descriptions detailing the actions taken to address or fix the reported concern.
Upload Verification Documents	M	TCTNo. 7.3	Permits handling personnel to upload supporting file proofs or images showing that a concern has been successfully settled.
View Department Performance Logs	L	CTNo. 7.4	Displays a historical log of all past concerns resolved by the specific department for internal tracking.
Users			
Register Profile Account	H	CTNo. 8.0	Permits campus stakeholders to self-register an account by providing valid institutional details.
Submit Concern/Feedback Form	H	CTNo. 8.1	Provides the primary submission form where users can select categories, write descriptions, and report issues.
Upload Supporting Evidence	M	CTNo. 8.2	Allows users to attach files, images, or screenshots to provide proof or context for their submitted concern.

Capstone Project*ConcernTrack:**Web-based School Concern and Feedback Reporting System*

Track Submitted Reports	H	CTNo. 8.3	Features a live user tracking panel to view the active status and assigned department of their submitted feedback
Receive Status Notifications	M	CTNo. 8.4	Sends real-time system notices or alerts to stakeholders when their filed concern receives an update or a final resolution.
Update Stakeholder Profile	L	CTNo. 8.5	Allows users to change their account personal settings, passwords, or contact details.

2.2 Features not to be Tested

Table 5 lists the system features that are not required for testing.

Table 5. Features not to be tested

Features	Description
Admin Registration	It needs not to be tested because registration will be done manually by the developer.
Network Security	Testing network security is out of the proponent's scope.

2.3 Testing Tools and Environment

The **ConcernTrack** testing will consist of Unit, System, Integration, and Acceptance Test levels. It is assumed that there will be at least one full-time independent test person for system/integration testing. However, with schedule makeand budget constraints, the testing will be mostly done by the project manager with the assistance of the project adviser.

The following emphasizes the types of testing that will be done for unit, system, integration, and acceptance testing. The template that will be used for designing test cases is shown below.

Test Case ID	Test Case Description

Test Conditions

Step #	Step Details	Expected Results	Actual Results	Pass / Fail / Not executed / Suspended

Figure 1. Test Case Template

Unit Testing:

Unit Testing will be done by the developer and will be approved by the project adviser. Proof of unit testing (test case list, sample output, data printouts, defect information) must be provided by the programmer before unit testing will be accepted and passed on to the test person. This kind of test is done at the source or code level for language-specific programming errors such as bad syntax, logic errors, or to test particular functions or modules.

a) White Box Testing

The UI is bypassed. Inputs and outputs are tested directly at code level and results are compared against specifications. It ignores the functions of the program under test and will focus only on its code and structure of the code.

b) Black Box Testing

This type of testing involves running through every possible input to verify that it results in the right outputs using the software as an end-user would.

Integration Testing:

Integration will be performed by the test manager and development team leader. A program will have up to two major defects as long as they do not impede testing of the program. This test exercise involves the entire subsystem and ensure that components play nicely together.

System Testing:

System Testing is mainly concerned with areas such as performance, security, validation, load, and configuration sensitivity. The developer will only focus on performance and load testing.

Acceptance Testing:

Testing will be performed by the actual end users with the assistance of the test manager. The system will be subjected to acceptance test once all critical and major defects have been reconciled.

3. Test Cases

3.1 Test Case: Login Functionality

Table 6. Test Case for verifying valid username and password.

4.0 Acceptance Test Result

The developed Web-Based School Concern and Feedback Reporting System was subjected to a user acceptance survey in terms of usability with twenty purposively-chosen students as respondents using a standardized research instrument. Result of the survey showed a general mean of 4.825 which was interpreted as “Highly Usable”. The findings revealed that the respondents strongly agreed that they will use the system frequently and that most students would learn to use the system very quickly with a mean of 5.00; that they feel very confident in using the system with a mean of 4.90; that the system is easy to use and the various functions of the system were well integrated got a mean of 4.75. Further, the respondents strongly disagreed that there were too many inconsistencies in the system got a mean of 5.00; that they needed to learn a lot of things before they could get along with the system got a mean of 4.85; that the system is cumbersome/awkward to use with a mean of 4.75; that they would need assistance to be able to use the system got a mean of 4.70; and that the system is unnecessarily complex with a mean of 4.55. Table 47 summarizes these findings. Table 47. Result of Usability Test

Item No.	Criteria	Numerical Rating	Descriptive Rating
1	I think I would like to use this system frequently.	5.00	Highly Usable
2	I found this system unnecessarily complex.	4.55	Highly Usable
3	I thought this software was easy to use.	4.75	Highly Usable
4	I think I would need assistance to be able to use this software	4.70	Highly Usable
5	I found the various functions in this software were well integrated.	4.75	Highly Usable
6	I thought there was too many inconsistency in this software.	5.00	Highly Usable
7	I would imagine that most people would learn to use this software very quickly.	5.00	Highly Usable
8	I found this software very cumbersome/awkward to use.	4.75	Highly Usable
9	I felt very confident using this software.	4.90	Highly Usable
10	I needed to learn a lot of things before I could get going with this software.	4.85	Highly Usable
General Mean		4.825	Highly Usable

Appendix

A.1 Test Data and Logs

A.1.1 Quality Assurance Test Logs

Table 1. Quality Assurance Test Logs Test 1

Task No.	Tester	Date of Test	Expected Result	Actual Result	Remarks
1	QA	October 15, 2025	Website should open, [data] can be entered, [prompt] for access, [dashboard] page is accessed.	Access Denied: Redirect back to login form Access granted: Redirect to Dashboard page	Passed
2	QA	October 15, 2025	Prompt for [successful] concern submission with [student] ID.	As expected	Passed
3	QA	October 15, 2025	Prompt for [successful] concern submission with [teacher] ID.	As expected	Passed
4	QA	October 15, 2025	Prompt for [successful] anonymous concern submission.	As expected	Passed
5	QA	October 15, 2025	Concern is correctly categorized upon submission (e.g., Facility issue).	As expected	Passed
6	QA	October 15, 2025	Concern [status] depends on date and administrative actions.	[Status] did not behave as expected	Failed
7	QA	October 15, 2025	administrator can assign a concern to a specific department. [Assignment] form is accessed.	As expected	Failed
8	QA	October 15, 2025	documents are uploaded/downloaded for [unresolved concerns].	Documents are not downloaded	Failed
9	QA	October 15, 2025	Concern feedback [page] is accessed, feedback report is previewed.	As expected	Passed
10	QA	October 15, 2025	administrator receives [notification] of new high-priority concerns.	As expected	Passed
11	QA	October 15, 2025	Prompt for [successful] concern category insertion and update.	As expected	Passed
12	QA	October 15, 2025	Prompt for [successful] resolution confirmation before marking a concern as resolved.	As expected	Passed
13	QA	October 15, 2025	Detailed [Reports] page is accessed, data is visible for export	Report data is not visible for export.	Failed
14	QA	October 15, 2025	[Records are displayed] clearly on the administrator dashboard.	Some pending [records] are missing from the dashboard.	Failed
15	QA	October 15, 2025	Prompt for [resolution confirmation] is displayed before saving.	As expected	Passed

Web-based School Concern and Feedback Reporting System

Table 1. Quality Assurance Test Logs Test 2

Task No.	Tester	Date of Test	Expected Result	Actual Result	Remarks
1	QA	October 30, 2017	Feedback Portal should open, user details can be input, authentication required, dashboard is accessed.	Access Denied: Redirect to login page Access granted: Redirect to Dashboard	Passed
2	QA	October 30, 2017	Prompt for successful student concern submission with correct data.	As expected	Passed
3	QA	October 30, 2017	Prompt for successful staff feedback submission with correct data.	As expected	Passed
4	QA	October 30, 2017	Prompt for successful Concern Category (Facility, Academic, Personnel) selection.	As expected	Passed
5	QA	October 30, 2017	Prompt for successful resolution plan insertion.	As expected	Passed
6	QA	October 30, 2017	Concern status (Draft, Open, Under Review, Escalated, Resolved) is dependent on date and current status.	Concern status behaved contextually with date changes.	Passed
7	QA	October 30, 2017	Resolved concern can be reopened, original submission form is displayed.	As expected	Passed
8	QA	October 30, 2017	Attachments/documents are uploaded/downloaded for unresolved concerns.	Documents are downloaded successfully	Passed
9	QA	October 30, 2017	Analytics/reports page is accessed, trend graphs are displayed	As expected	Passed
10	QA	October 30, 2017	Deadline is set for unresolved urgency, staff is notified. maps to addresses is mapped) addressed	As expected	Passed
11	QA	October 30, 2017	Prompt for successful student profile picture upload	As expected	Passed
12	QA	October 30, 2017	Prompt for successful Admin settings update (e.g., concern categories)	As expected	Passed
13	QA	October 30, 2017	Specific Reports are accessed, PDF export dialog is active	PDF export dialog is active, documents are downloaded successfully	Passed
14	QA	October 30, 2017	Records from all concerns are displayed	All records are displayed as expected	Passed
15	QA	October 30, 2017	Prompt for successful resolution is confirmation	As expected	Passed

A.1.2 User Acceptance Test Log

Table 1. User Acceptance Test Log Test 1

User	Features	Expected Result	Remarks Pass / Fail	
Group 1: Admin				
Admin	Login	Prompt for successful login.	[✓]	[]
	Manage Concern Categories	concerns are added, updated, and deleted from the database accordingly. - <u>Category Name</u> - <u>Priority</u> - <u>Assignee Department</u>	[✓] [✓] [✓]	[] [] []
	Configure System Settings	System settings (e.g., concern retention periods) are saved and applied to the system.	[✓]	[]
	View Consolidated Reports	Consolidate reports with <u>trend data and resolution times</u> are viewed and exported successfully.	[✓]	[]
	Manage Staff Accounts	Staff and Teacher access accounts are managed in the system accordingly.	[✓]	[]
Group 2: Staff/Teacher				
Staff/Teacher	Login	Prompt for successful login.	[✓]	[]
	Review Assigned Concerns	View assigned concern details and user information.	[✓]	[]
	Update Concern Status	Concern status is successfully changed to <u>In Progress</u> , <u>Escalated</u> , or <u>Resolved</u> in the system.	[✓]	[]
	Add Internal Notes	Internal notes or comments are saved to the concern's history.	[✓]	[]
Group 3: Student				
Student	Login	Prompt for successful login.	[✓]	[]
	Submit New Concern	Select a category, fill <u>details</u> , and submit a new concern.	[✓]	[]
	Attach Supporting Documents	Supporting documents or image files are uploaded and attached to the submission.	[✓]	[]
	Track Concern Progress	Current concern status and submission history are viewed.	[✓]	[]
	Receive Notifications	Notifications on concern status changes (e.g., <u>assignment</u> , <u>resolution</u>) are received.	[✓]	[]
